The System Information Tool program displays detailed information about the operating system and hardware specifications of your computer. This tool allows you to review the System Configuration, Display, Memory, CPU, and other important system settings. Simply click the "View System Information" button from the menu to open the System Information dialog box. We provide you with detailed technical and hardware information about your computer, including PC version, a detailed description of all hardware installed, the video adapters, processors, and other important hardware. We also explain the operating system and other important Windows-related information. For example, the operating system name, major and minor versions, vendor, Windows build, real-time clock (RTC) and hardware clock, the registry path and info, and native installation. Detailed explanation of software installed on your computer This utility also offers an in-depth analysis of installed software, including the manufacturer name and version, the software program version, the installing date, the location, the path, along with detailed data about hardware devices that are installed. We provide you with a list of all the installed hardware drivers and the operating system updates that you can update. The screen resolution, color depth, primary, secondary, and external monitor details are also shown. We provide you with detailed information about your printer, scanner, and other devices. We explain the processor, physical memory, virtual memory, total memory, temporary memory, available memory, total available disk space, and other useful data about your computer. Additional system status and usage information The System Information Tool utility also provides you with an in-depth analysis of the system status and other Windows-related information. We provide you with a list of all the system processes, along with their names, versions, the date they were created, the current states, CPU usage, RAM, hard drive, and other relevant information. For example, if we click the "Processes" tab, we see that the system is running about 30 background processes. We also explain the operating system services, the number of processes, and the minimum and maximum values of CPU usage, as well as the RAM, total hard drive, and available hard drive. We also explain the registry key location, the virus' current status, and other useful information. System information, including the manufacturer name, the hardware description, the operating system name and version, the operating system build, hardware detected in the system, the number of disks, total disk space, physical memory, memory status,

What's New in the System Information Tool?

* System Information Tool is a useful system utility that displays critical data about your Windows operating system. * You can use this application to check your system's platform and version, physical and virtual memory, primary monitor size, CPU ID and the number of available cores. * The application can also monitor CPU and RAM usage in real-time. * System Information Tool includes a real-time CPU and RAM usage monitor. * System Information Tool supports (4-way) all Intel processors on 32-bit and 64-bit Windows. * System Information Tool is a clean, lightweight utility that can be deployed in seconds. * It does not require installation, and it does not store any data on your computer. * System Information Tool supports 32-bit and 64-bit editions of Windows 7, 8, 8.1, 10. * System Information Tool is a freeware. CPU Usage Information Monitor is a freeware utility that monitors the usage of your CPU. It will provide you with information on your PC's CPU usage, memory usage, and how many applications are currently being used by your computer. It will also inform you when the CPU's usage has dropped below a certain level, so that you can stop or pause your current application(s) to conserve memory. CWM Monitor is a multi-platform monitoring utility that will help you to see what applications are consuming your system resources. It will be useful if you're having performance issues or just need to see what is going on. CapTure PC information is a multi-platform application that provides you with details about your computer configuration, memory and CPU usage. CBS Monitoring is the utility to know what other computers are using on the Internet at any given moment. It does so by constantly monitoring what is happening in the background, and looking at the usage of the most visited sites on the Internet. CPU Usage Monitor provides you with detailed information about your computer's usage of the CPU, memory, and other system resources. It will help you to identify and solve issues in your PC, and keep your system running smoothly. CPU Usage Statistics takes a deep look into the activity of your processor. This application provides you with the ability to know the current activity of your processor, including CPU usage, thread and memory usage, and how many applications are currently running. CPU Usage Monitor is an easy to use tool that provides you with detailed information about your PC's CPU usage, memory, and other

System Requirements:

Supported operating system Requires a 64 bit processor. 64 bit processors are required to run the game. It will not work on a 32 bit processor. DVD drive The DVD is required for installation, if you do not have a DVD drive, you can install the game in a virtual machine using the internet installer. The game will not work if you do not have a DVD drive. Minimum system requirements Processor: Intel Dual Core 2.4Ghz or AMD Phenom II X4 925 or greater
